Bronchoalveolar Lavage:

Bronchoalveolar Lavage in Basic Research and Clinical Medicine Oliver Schildgen, Verena Schildgen, Michael Brockmann, 2023-12-06 This book provides a practical approach to bronchoalveolar lavage BAL and its analyses which are used worldwide in both research and clinical settings. It includes useful guidelines with a theoretic background and provides details on microscopic and flow cytometric measurements for all known differential diagnostics made with BAL analyses from chronic diseases like COPD and ILD via infectious diseases to inherited illnesses like cystic fibrosis. It includes BAL in both adult and pediatric medicine. The text is supported throughout by illustrations and clinical cases serving as an invaluable resource for respiratory medicine and infectious disease clinicians and trainees. Key features: Uses BAL in the infectious diseases field and the search for respiratory viruses using the reverse transcription polymerase chain reaction (RT-PCR) technique. Presents contributions from worldwide experts. Clarifies the BAL technique and its diagnostic utility to respiratory physicians, cytologists, and pathologists involved in the diagnosis of pulmonary disease. Provides an updated perspective on the future applications of BAL technology to research and clinical medicine.

King, 2011 Deals with interstitial lung diseases and includes clinical pathologic radiologic and physiologic evaluation of the patient with ILD This book covers a wide array of disorders sarcoidosis asbestosis hypersensitivity pneumonitis drug induced lung disease connective tissue disease and pulmonary vasculitis to name but a few **Paediatric Bronchoscopy** Kostas N. Priftis, 2010-01-01 This book provides an in depth state of the art critical review of the technique and the applications of flexible and rigid bronchoscopy to infants and children Written by an international panel of experts it reviews the technical aspects of the procedure its common and highly specialized applications as well as its potential alternatives The chapters are enhanced by a wealth of original figures A major

innovation of the book is the inclusion of online videos from actual bronchoscopies that further illustrate and elaborate on the information provided in the text. The book is addressed to paediatric pulmonologists and otorhinolaryngologists both experienced and in training as well as to other personnel who are involved in the performance of the procedures. In addition, it is recommended to pulmonologists for adults and general paediatricians who need to be able to evaluate the usefulness of bronchoscopy for their patients and be aware of its limitations and potential contra indications.

Diffuse Parenchymal Lung Disease Ulrich Costabel, Roland M. Du Bois, Jim J. Egan, 2007-01-01. Diffuse parenchymal lung disease (DPLD) represents a large and heterogeneous group of disorders. Although new insights into the pathogenesis and new techniques such as high resolution CT have led to a better understanding of DPLD, clinical management remains a challenge. This volume is designed to become a valuable aid in the diagnosis and management of DPLD. It starts with general topics such as a new classification system for DPLD, the general diagnostic approach and clinical evaluation of the patient by radiology, histological patterns and bronchoalveolar lavage. This is followed by consideration of some basic aspects such as the genetics of DPLD, the principles of granuloma formation, pulmonary fibrogenesis and vasculitis, as well as novel treatment approaches. A large part of the book consists of disease specific chapters which discuss granulomatous disorders, idiopathic pulmonary fibrosis and other entities of idiopathic interstitial pneumonia, the collagen vascular diseases, drug induced infiltrative lung disease as well as orphan diffuse lung diseases including Langerhans cell histiocytosis, lymphangioleiomyomatosis and pulmonary alveolar proteinosis. Special chapters on DPLD in children and lung transplantation for end stage fibrosis complete this comprehensive publication. Written by internationally known experts, this well organized volume is recommended to a wide audience including respiratory physicians in training, practice and research as well as radiologists and pulmonary pathologists.

Human Airway Inflammation Duncan F. Rogers, Louise E. Donnelly, 2008-02-02. Rubor (redness), tumor (swelling), calor (heat) and dolor (pain) are the classical signs of inflammation. These features are obvious in the skin where injury or disease causes flare, wheal and painful burning sensations. Vasodilation underlies the flare and heat, plasma exudation the swelling and activation of sensory nerves relays pain. In chronic conditions, skin biopsies show inflammatory cell infiltrate. Inflammation is not unique to the skin and contributes to disease and repair processes in other organ systems in the body. From the viewpoint of this volume, lung inflammation is now recognized as central to the pathophysiology of a number of severe respiratory conditions, the two most common being asthma and chronic obstructive pulmonary disease (COPD). In asthma and to a lesser extent COPD, there is evidence of vasodilatation with congestion of blood vessels accompanied by reddening of the airway mucosa and of plasma exudation leading to swelling of the airway wall. Similarly, although less pronounced than in the skin, there is evidence of pain; for example, the pleasant chest sensations associated with asthma attacks. Understanding the pathogenesis of airway inflammation will enable rational design of drugs to effectively treat conditions such as asthma and COPD. However, whereas immediate access to the skin facilitates investigation of disease processes, the lung, although open to

atmosphere is much less accessible Consequently the investigation of lung inflammation is usually indirect Thus a wide variety of research techniques are used
