(Received 27 June 1995)

Summary—In the present study, an attempt has been made to elucidate sex differences present in the Axis II, personality disorders, in the DSM-III-R. Five-hundred and thirty-one subjects, 176 healthy volunteers and 355 psychiatric patients, 231 males and 300 females, were investigated by means of the SCID screen questionnaire. There were significant sex differences as concerns 11 out of total 101 Axis II criteria. The most pronounced sex differences were seen in narcissistic, borderline and antisocial personality disorders. As a previous study demonstrated that personality disorders are in fact dimensional traits where the cut off points are placed within a normal rather than a bimodal distribution, it was of interest to elucidate the number of criteria fulfilled for each separate personality disorder. Significant sex differences in this dimensional perspective were seen in self-defeating and borderline personality disorders (females predominating). Antisocial personality traits were more common among males.

It has also been demonstrated in an earlier study that if an adjusted cut-off is used, the presence or absence of personality disorders can be determined by means of the SCID screen questionnaire with an accuracy of a kappa coefficient = 0.78. If such a method is used, males had a higher prevalence of obsessive-compulsive and schizoid personality disorder. The opposite was true for borderline personality disorder.

INTRODUCTION

The introduction of an Axis II and operationalized criteria for specific personality disorders has had a dramatic effect on the level of interest in these disorders among clinicians and researchers in the field of psychiatry. Standardized methods for assessment of personality disorders have been developed and interrater reliabilities for the individual measures are in the acceptable range. Many studies have focused on the frequency of personality disorders in different populations and the results obtained indicate that personality disorders are prevalent in the general population (Maier, Lichtermann, Klingler & Heun, Zimmerman & Coryell, 1990) and in psychiatric settings (Alnaes & Torgersen, 1988; Bodlund, Ekselius & Lindström, 1993; Kullgren, 1992).

In the DSM-III and DSM-III-R (American Psychiatric Association, 1987) sex differences in the prevalence of certain personality disorders are suggested. Specifically, DSM-III and DSM-III-R postulate that males may be more prone to develop antisocial, obsessive-compulsive and paranoid personality disorders and that females may be more prone to develop borderline, dependent and histrionic personality disorders. In several studies diagnoses of antisocial personality have been documented as more common among men than among women (Robins, Helzer, Weissman, Orvaschel, Gruenberg, Burke & Regier, 1984; Dahl, 1986; Kass, Spitzer & Williams, 1983; Golomb, Fava, Abraham & Rosenbaum, 1995). The prevalence of obsessive-compulsive personality disorder in epidemiological surveys varies between 1.7–6.4% (Weissman, 1993) depending on method of assessment used. In a study by Nestadt, Romanovski, Brown, Chahal, Merchant, Folstein, Gruenberg and McHugh (1991), the rate among men was about five times that among women. Evidence also exists for men being more likely to be given a diagnosis of paranoid personality disorder (Reich, 1987; Alnaes & Torgersen, 1988). Data concerning sex differences in borderline personality disorder are contradictory. Swartz, Blazer, George and Winfield (1990) found a significantly higher proportion of women assigned borderline personality diagnosis in a community sample while Reich (1987) and Kass *et al.* (1983) failed to find sex differences in clinical settings. In a recent study (Nestadt, Romanovski, Merchant, Folstein, Gruenberg & McHugh, 1990), the prevalence of his-

Disorders of Personality Theodore Millon, 1981-03-30 Brings together clinical literature on personality disorders in a single source book Coordinates and evaluates current theory on the subject in close conjunction with the new Diagnostic and Statistical Manual of Mental Disorders DSM III to which the author made substantial contribution in the section on personality disorders Presents contrasting views of the dynamics and development of each syndrome with special attention to the newer personality syndromes such as avoidant narcissistic borderline and schizotypal as well as more common mixed personality types Disorders of Personality Theodore Millon, 2011-04-08 Now in its Third Edition this book clarifies the

distinctions between the vast array of personality disorders and helps clinicians make accurate diagnoses It has been thoroughly updated to incorporate the changes in the forthcoming DSM 5 Using the classification scheme he pioneered Dr Millon guides clinicians through the intricate maze of personality disorders with special attention to changes in their conceptualization over the last decade Extensive new research is included as well as the incorporation of over 50 new illustrative and therapeutically detailed cases This is every mental health professional's essential volume to fully understanding personality *Obsessive-Compulsive Disorder* Richard P. Swinson, Martin M. Antony, S. Rachman, Margaret A. Richter, 2001-10-31 Drawing upon extensive interviews and assessments of school age children who have lost a parent to death this book offers a richly textured portrait of the mourning process in children The volume presents major findings from the Harvard Child Bereavement Study and places them in the context of previous research shedding new light on both the wide range of normal variation in children's experiences of grief and the factors that put bereaved children at risk The book also compares parentally bereaved children with those who have suffered loss of a sibling to death or of a parent through divorce exploring similarities and differences in these experiences of loss A concluding section explores the clinical implications of the findings and includes a review of intervention models and activities as well as a screening instrument designed to help identify high risk bereaved children

Comprehensive Handbook of Psychopathology Henry E. Adams, Patricia B. Sutker, 2013-04-17 The first edition of Comprehensive Handbook of Psychopathology was published in 1984 almost a decade ago In the interim there has been an explosion of information in psychopathology Proliferation of knowledge has included a widening base of research data and changing or new concepts and theories regarding classification measurement methods and etiology of abnormal behaviors and mental disorders It has been an active and productive period for biological and behavioral scientists and clinicians particularly in terms of changing notions of the complex interaction of environmental and biological factors in many disorders For example with the classic disorders such as anxiety and dissociative disorders our understanding while far from perfect has been greatly enhanced in recent years Whereas there was almost a vacuum of empirical knowledge ten years ago about the personality disorders concentrated efforts have been undertaken to investigate classification comorbidities and expression of the personality disorders and

variants in normal personality traits In addition scientific advances in the fields of behavioral medicine health psychology and neuropsychology have greatly contributed to our knowledge of psychopathology and the interplay of psychobiological factors It is now commonly acknowledged that psychopathology is not limited to the traditional mental illness categories it also plays a significant role in many physical illnesses such as cancer and AIDS With these developments it became clear that the first edition of this handbook was outdated and that a revision was needed Oxford Textbook of Psychopathology Paul H.

Handbook of Depression in Children and Adolescents William M. Reynolds,Hugh F. Johnston,2013-11-22 Anyone who has ever been close to a seriously depressed child has undoubtedly been affected by the youngster s vulnerability misery and pain Indeed it is much like caring for a child who is in physical pain For the child in the depths of depression no activity is fun nothing can be enjoyed and no one can provide enough consolation or comfort At times the youngster may cry or whimper There may be fits of defiance or rage and sometimes withdrawal into a numb sullen silence A child in this state tries the patience of parents and siblings Remedies of every sort are tried including gifts punishments bribes lectures pleading and a host of others Such efforts occasionally provide temporary relief but more often they seem to make matters worse Commonly there is an emotional wall of anger and frustration between a depressed child and other family members that may inevitably lead to further isolation and withdrawal If too much time passes without their being helped many depressed children and adolescents come to believe that suicide offers the only real relief for their pain Currently there is a Depression Awareness Week that includes free screening at participating health and mental health settings around the United States and is designed to identify depression in adults suggesting that society s awareness of depression and psychiatric disorders is focused to a large extent on adults
