The God Equation Mike Hockney, 2013-08-26 Euler's Formula is the most beautiful equation in mathematics Yet it's much more It governs the universe and defines the soul Euler's Formula perfectly complements Leibniz's Monadology They form the most powerful intellectual combination ever capable of establishing a true grand unified theory of everything including religion It provides a rational explanation of near death and out of body experiences and homeopathy It overturns Einstein's principle of relativity providing the same results via an absolute framework that restores the reality principle In this groundbreaking book we provide the solution to the Cartesian mind body problem via the Fourier transform which has the Euler Formula as its engine We present the Riemann sphere which works in perfect harmony with the Euler Formula as the ideal working model of the human soul And we give the first ever technical explanation of the process of reincarnation The Euler equation is everything you thought and more It's divine

Communications, Signal Processing, and Systems Qilian Liang, Wei Wang, Xin Liu, Zhenyu Na, Min Jia, Baoju Zhang, 2020-04-04 This book brings together papers from the 2019 International Conference on Communications Signal Processing and Systems which was held in Urumqi China on July 20-22 2019 Presenting the latest developments and discussing the interactions and links between these multidisciplinary fields the book spans topics ranging from communications to signal processing and systems It is chiefly intended for undergraduate and graduate students in electrical engineering computer science and mathematics researchers and engineers from academia and industry as well as government employees

mathematics or conversely for experts in other areas of mathematics to become acquainted with some aspects of graph theory Terence Tao University of California Los Angeles CA Laszlo Lovasz has written an admirable treatise on the exciting new theory of graph limits and graph homomorphisms an area of great importance in the study of large networks It is an authoritative masterful text that reflects Lovasz s position as the main architect of this rapidly developing theory The book is a must for combinatorialists network theorists and theoretical computer scientists alike Bela Bollobas Cambridge University UK

Modal Matters Phillip Bricker,2020 Drawing together his work from four decades Phillip Bricker provides a comprehensive account of modal reality the realm of possible worlds from a Humean perspective with excursions into neighboring topics in metaphysics Many of the chapters in this volume focus on aspects of David Lewis s metaphysics and his defence of modal realism sometimes further developing and defending Lewis s views sometimes deviating from them in substantial ways The volume is presented in four parts part one sketches an account of reality as a whole both the mathematical and the modal defending a form of plenitudinous realism part two presents and defends a realist theory of concrete possible worlds with an absolute ontological distinction between the actual and the merely possible part three presents and defends a Humean account of modal plenitude formulating and endorsing principles that guarantee a plenitude of recombination of possible structures and of alien contents and part four applies the Humean account to truthmaking mereology spacetime and quantities An uncompromising Humean Bricker shows that holding fast to Humean strictures leads to views that differ in radical ways from those prevalent among contemporary metaphysicians

Molecular Interactions Aurelia Meghea,2012-02-29 In a classical approach materials science is mainly dealing with interatomic interactions within molecules without paying much interest on weak intermolecular interactions However the variety of structures actually is the result of weak ordering because of noncovalent interactions Indeed for self assembly to be possible in soft materials it is evident that forces between molecules must be much weaker than covalent bonds between the atoms of a molecule The weak intermolecular interactions responsible for molecular ordering in soft materials include hydrogen bonds coordination bonds in ligands and complexes ionic and dipolar interactions van der Waals forces and hydrophobic interactions Recent evolutions in nanosciences and nanotechnologies provide strong arguments to support the opportunity and importance of the topics approached in this book the fundamental and applicative aspects related to molecular interactions being of large interest in both research and innovative environments We expect this book to have a strong impact at various education and research training levels for young and experienced researchers from both academia and industry

Networks in Aviation Philipp Goedeking,2010-10-07 Aviation networks play a critical role in the success of today s airlines and airports This book provides insight on all aspects of modern network strategies and structures ranging from market research to hub design operations organization alliances benchmarking and antitrust issues Considering both the airline and the airport perspectives the book explains the economics of connectivity or productivity driven hub structures through basic mathematics which helps the

reader to comprehend the structural strengths and weaknesses of aviation networks More than 100 charts help clarify the topics at hand
