Disturbances In The Linear Model Estimation And Hypothesis Testing:

Disturbances in the linear model, estimation and hypothesis testing C. Dubbelman, 2012-12-06 1 1 The general linear model All econometric research is based on a set of numerical data relating to certain economic quantities and makes inferences from the data about the ways in which these quantities are related Malinvaud 1970 p 3 The linear relation is frequently encountered in applied econometrics Let y and x denote two economic quantities then the linear relation between y and x is formalized by where β_1 and β_2 are constants When β_1 and β_2 are known numbers the value of y can be calculated for every given value of x Here y is the dependent variable and x is the explanatory variable In practical situations β_1 and β_2 are unknown We assume that a set of n observations on y and x is available When plotting the observed pairs $(x_1, y_1), (x_2, y_2), \dots, (x_n, y_n)$ into a diagram with x measured along the horizontal axis and y along the vertical axis it rarely occurs that all points lie on a straight line Generally no β_1 and β_2 exist such that $y_i = \beta_1 x_i + \beta_2$ for $i = 1, 2, \dots, n$ Unless the diagram clearly suggests another type of relation for instance quadratic or exponential it is customary to adopt linearity in order to keep the analysis as simple as possible

The Linear Regression Model Under Test W. Kraemer, H. Sonnberger, 2012-12-06 This monograph grew out of joint work with various dedicated colleagues and students at the Vienna Institute for Advanced Studies We would probably never have begun without the impetus of Johann Maurer who for some time was the spiritus rector behind the Institute's macromodel of the Austrian economy Manfred Deistler provided sustained stimulation for our research through many discussions in his econometric research seminar Similar credits are due to Adrian Pagan Roberto Mariano and Garry Phillips the econometrics guest professors at the Institute in the 1982-1984 period who through their lectures and advice have contributed greatly to our effort Hans Schneeweiss offered helpful comments on an earlier version of the manuscript and Benedikt Poetscher was always willing to lend a helping hand when we had trouble with the mathematics of the tests Needless to say that any errors

are our own Much of the programming for the tests and for the Monte Carlo experiments was done by Petr Havlik Karl Kontrus and Raimund Alt Without their assistance our research project would have been impossible Petr Havlik and Karl Kontrus in addition read and criticized portions of the manuscript and were of great help in reducing our error rate Many of the more theoretical results in this monograph would never have come to light without the mathematical expertise of Werner Ploberger who provided most of the statistical background of the chapter on testing for structural change

Linear Statistical Inference T. Calinski,W. Klonecki,2013-03-09 An International Statistical Conference on Linear Inference was held in Poznan Poland on June 4 8 1984 The conference was organized under the auspices of the Polish Section of the Bernoulli Society the Committee of Mathematical Sciences and the Mathematical Institute of the Polish Academy of Sciences The purpose of the meeting was to bring together scientists from various countries working in the diverse areas of statistical sciences but showing great interest in the advances of research on linear inference taken in its broad sense Thus the conference programme included sessions on Gauss Markov models robustness variance components experimental design multiple comparisons multivariate models computational aspects and on some special topics 38 papers were read within the various sessions and 5 were presented as posters At the end of the conference a lively general discussion session was held The conference gathered more than ninety participants from 16 countries representing both parts of Europe North America and Asia Judging from opinions expressed by many participants the conference was quite successful well contributing to the dissemination of knowledge and the stimulation of research in different areas linked with statistical linear inference If the conference was really a success it was due to all its participants who in various ways were devoting their time and efforts to make the conference fruitful and enjoyable

Anselin,2013-03-09 Spatial econometrics deals with spatial dependence and spatial heterogeneity critical aspects of the data used by regional scientists These characteristics may cause standard econometric techniques to become inappropriate In this book I combine several recent research results to construct a comprehensive approach to the incorporation of spatial effects in econometrics My primary focus is to demonstrate how these spatial effects can be considered as special cases of general frameworks in standard econometrics and to outline how they necessitate a separate set of methods and techniques encompassed within the field of spatial econometrics My viewpoint differs from that taken in the discussion of spatial autocorrelation in spatial statistics e g most recently by Cliff and Ord 1981 and Upton and Fingleton 1985 in that I am mostly concerned with the relevance of spatial effects on model specification estimation and other inference in what I call a model driven approach as opposed to a data driven approach in spatial statistics I attempt to combine a rigorous econometric perspective with a comprehensive treatment of methodological issues in spatial analysis *Impact of the Coronavirus Pandemic (COVID-19) on Mood Disorders and Suicide* Paul Stokes,Carlo Lai,Paola Aceto,Roger McIntyre,Richard Porter,2022-02-28 **Democratic Accountability and International Human Development** Kamran Ali Afzal,Mark Considine,2014-11-27 Scholars and policymakers have long known that there is a strong link between human development and spending on key areas such as education and health However many states still neglect these considerations in favour of competing priorities such as

expanding their armies This book examines how states arrive at these decisions analysing how democratic accountability influences public spending and impacts on human development The book shows how the broader paradigm of democratic accountability extending beyond political democracy to also include bureaucratic and judicial institutions as well as taxation and other modes of resource mobilisation can best explain how states allocate public resources for human development Combining cross country regression analysis with exemplary case studies from Pakistan India Botswana and Argentina the book demonstrates that enhancing human capabilities requires not only effective party competition and fair elections but also a particular nesting of public organisational structures that are tied to taxpaying citizens in an undisturbed chain of accountability It draws out vital lessons for institutional design and our approach to the question of human development particularly in the less developed states This book will be of great interest to postgraduate students and researchers in the fields of political economy public policy governance and development It also provides valuable insights for those working in the international relations field including inside major aid and investment organisations
