Personality Disorders and States of Aloneness John G. McGraw,2012-01-01 This book is the second volume of an interdisciplinary study chiefly one of philosophy and psychology which concerns personality especially the abnormal in terms of states of aloneness primarily that of the negative emotional isolation customarily known as loneliness Other states of aloneness investigated include solitude reclusiveness seclusion desolation isolation and what the author terms aloneliness alonism lonism and lonerism Insofar as this study most explicitly focuses on abnormal personalities it employs the general and specific definitions of personality aberrations as formulated by the American Psychiatric Association in its latest edition of the Diagnostic and Statistical Manual of Mental Disorders DSM IV The author views personality as preeminently comprised of the individual s interpersonal relationships Unlike the DSM IV he proposes that people with personality disorders not only possibly but necessarily manifest deviancy regarding interpersonal functioning via serious shortcomings in shared inwardness paramountly reciprocated intimacy This work also engages in an analysis of five social factors that are conducive to predisposing precipitating and maintaining negative kinds of personality and aloneness The author has formed these factors into an acronym titled SCRAM since when they are present intimacy scurries away and in its absence loneliness and other sorts of unwanted aloneness scamper in and fill the person with unhappiness via for instance sadness and self worthlessness The constituents of SCRAM are the following social illnesses Successitis for example the fixation on fame and fortune

Capitalitis greed driven unfettered capitalism Rivalitis competitiveness Atomitis hyper individualism and Materialitis for example the anti spirituality of consumeritis In sum this book provides a different perspective on personality via the lenses of various types of aloneness and their lack of public and private intimacy especially love *Experience Sampling Method* Joel M. Hektner, Jennifer A. life and to the flowering of the human spirit as other basic needs The same can be said for academics and practitioners in other disciplines in social science as well as those in mental health and psychiatry Although lawyers might come close to accepting the proposition it seems to me that in the main their professional expertise is directed to the superficial maintenance of systems of justice rather than to the underlying reasons for doing so This book arising from academic clinical empirical and theoretical studies goes the further mile by giving justice its proper place in the hierarchy of basic human needs It is designed in accord with a general systems theory in which contributions are welcomed from international scholars and researchers in different domains of knowledge Above all it is written in the hope of inducing others to share a commitment to justice and do their utmost to prevent injustice
